

Printing Tips:

To print your certificates using the template, you will need to experiment briefly to determine how to orient (face down, face up, etc.) the certificates in your printer.

1. First, use a copy machine to make several “draft” copies of the ACS Certificate Template you purchased.
2. Insert draft copies of the certificate into your printer.
3. Open the certificate template and fill in the information then click on the “Print Form” button just above the certificate.
4. If the certificate does not print on the draft copy properly, adjust the orientation of the draft copies in your printer and print again.
