## **Organic and Inorganic Architectures for Solution-Processable Solar Photovoltaics**

Cherie R. Kagan, Department of Electrical and Systems Engineering, Department of Materials Science and Engineering, Department of Chemistry, University of Pennsylvania

We aim to tailor the interface and architecture of bulk heterojunction blends and bilayers of organic semiconductors and functionalized fullerenes or inorganic nanocrystals or nanowires. We have also constructed new measurement capabilities to study the physics and performance of these hybrid materials as the active layers in solar cells.
